### UNDERCOUNTER INSTALLATION **DIMENSIONS (IN INCHES)**

### **MODEL CTW900**

### When installed under a cooktop:

Warming drawers are suitable for installation below only certain specified cooktop models. See the label attached to the top of the warming drawer for suitable models. A solid barrier and air gap between cooktop and warming drawer are required.

> Note: When installing the warming drawer below a cooktop, a solid barrier must be installed at least 1" from the lowest point of the bottom of cooktop burner box to the top of the cutout. Use any solid material such as 1/4"-thick plywood. Allow at least 1/4" air gap between the barrier and the top of the warming drawer. See label on top of the warming drawer for approved cooktop models

Note: Door handle protrudes 3" from door face. Cabinets and drawers on adjacent 45° and 90° walls should be placed to avoid interference with the handle

Installation information: Before installing, consult installation instructions packed with product for current dimensional data.

 $\textbf{Note:} \ \textbf{Use of drawer with ZXD30B custom panel kit will result in the panel not being flush}$ with adjacent cabinet doors and drawers.

The wave guide cover is a thin specialized sheet consisting of mica material which covers the outlet where microwaves are emitted for cooking. Microwaves pass freely through this cover while it prevents steam and food particles from entering the magnetron area during cooking. This cover is not to be removed or altered. Doing so may void the product's warranty.

Location of wave guide cover will vary per model.

# DIMENSIONS AND INSTALLATION INFORMATION (IN INCHES)

### **MODELS CVW7361, CVW7301**

30" models require a 30"-wide opening \*The supplied duct cover fits 7'-5" to 9'-3" ceiling heights (10' with optional high ceiling kit JXDC71, JX10DC73)

36" models require a 36"-wide opening
\*The supplied duct cover fits 7'-5" to 9'-3" ceiling heights
(10' with optional high ceiling kit JX10DC73)

The vent hood must be installed 24" min. above the cooking surface. For optimal performance, installing the hood more than 36" above the cooking surface is not recommended. The hood installation height above the cooking surface depends upon ceiling height. The telescopic duct cover conceals the ductwork running from the top of the hood to the ceiling.

NOTE: Installation height should be measured from the cooking surface to the lowest part of the hood. This hood may be installed onto a wall and vented to the outdoors, or it can be installed for recirculating operation. Parts for recirculating operation are supplied with the hood. However, when installed for recirculating operation, the optional charcoal Filter JXCF71 will need to be purchased separately.
